

**RAM-Pod III™** is a revolutionary mounting platform that adjusts to fit any vehicle. Rigiflex™ legs allow the installer to form the mount over consoles, between seats, under the dash, and around obstacles. Slotted feet can be secured using vehicle seat rails or mounting screws. Booted legs offer support but require no attachment. Use all slotted feet, booted feet, or a combination to suit your needs. These legs are easily cut to fit and come with an attractive black sleeve for a professional and finished look.

Atop this platform, ball & socket or swing arm mounts may be attached for endless possibilities.
