

With more than **600** part numbers with four ball sizes it is important to first understand the **RAM-?-XXX** numbering system.

To order R-A-M systems or components one must first understand our numbering system. To help you understand our format we are providing the following examples. It is four different sizes of a basic R-A-M Mounting System and corresponding Base With Ball. **RAM-D-101 & D-202** would have **2 1/4"** balls, **RAM-101 & 202** would have **1 1/2"** balls, **RAM-B-101 & B-202** would have **1"** balls and the **RAM-A-102 & A-238** would have **9/16"** balls. Note that the C size balls don't require the letter C following the RAM- while all other sizes do require a letter. Be careful to make sure to have the letter in the proper location of the part number so as to order the correct size system or component.

D Size Ball
2 1/4" Diameter

RAM-D-202
Base With Ball

C Size Ball
1 1/2" Diameter

RAM-202
Base With Ball

B Size Ball
1" Diameter

RAM-B-202
Base With Ball

A Size Ball
9/16" Diameter

RAM-A-238
Base With Ball

RAM-D-101
System

RAM-101
System

RAM-B-101
System

RAM-A-102
